07/08/2026 - Technician: Peter Hill - Work Performed: Repair - 07/08/26- Customer would like a Rinnai water heater installed. Customer has a house that is around 1800 sq ft, 2 bath. Tech will need to install water heater on the outside wall as seen in the images. Tech will need to trench and bury 35' of line from the tank to the water heater. The existing regulator on the gaspack will need to be updated. Existing tank will need to be picked up and either have it painted and reset in place. Or have a new 500AG set in place. Customer will have to run water lines and have a electric line put in place. Tech will then have to return to perform a safety check/P3.

07/09/2026 - Technician: Peter Hill - Work Performed: Appliance Install - 07/09/26- Customer purchased a tankless water heater from us and wanted it installed. Tech installed the water heater and dug a trench and buried line from the tank to the water heater location. Tech connected the line to the new regulator on the tank and to the new regulator for the water heater. Tech installed the plumb kit and surround for the water heater. Tech connected the water heater to the gasline. Leak tested- no leaks found.

Tech did not install a monitor or switch out the tank due to use not having a boom truck at this time. Schedule for Tech to set a new tank once we have a boom truck and tech will install the monitor at the same time. No P3 at this time till the customer can get the plumbing and electrical hooked up. Schedule for a P3 once that task is completed by the customer. OK EB 8/21
