(For Additional Comments Use Back of Form)

This inspection covers (propane/LP Gas) items and equipment visible and accessible to the service technician and represents the conditions existing on the date of inspection. It does not cover latent or manufacturing defects, and the internal working of sealed equipment, or structural components and cannot be construed to cover future defects or unforeseen happenings.

Ann Suttles
 (Please Print)

I know how to turn off gas in case of emergency.
 I have smelled propane and can detect its odor.
 I have received the Consumer Safety Information.
 I had gas system deficiencies and/or corrections, if any clearly explained to me.
 I am satisfied with the service work performed.

Description of Work

We removed and hauled away the old water heater unit and began the installation of the new replacement 40 gallon propane direct vent water heater unit. We connected the gas line to the water heater gas valve as well as added new sections of 3/4" pex water supply lines with new shut off valve as well as mounted and secured the expansion tank.

****When removing the new water heater from the box we found that the dual exhaust vent tubing was not included with the packaging. This is usually included inside of the box. I made the supervisor aware of the and he will be reaching out to the appropriate people about getting the proper parts. We will need to coordinate and arrange time to return and complete the water heater installation.

****The gas was shut off at the main tank prior to our arrival and we have not opened the gas yet due to lost of ongoing construction throughout the home.

****The home has running cold water only. We did not fully connect the water supply lines to the water heater yet..

****6/12- returned with parts to complete- water and gas still cut off due to ongoing construction ****
