06/16/2025 - Technician: 053 ANDREW BILBREY - Work Performed: Appliance Sale - Replaced tankless with a tankless WH using same vent and water valve kit, then installed recirculation crossover at furthest faucet. Tank was pumped and burned off to replace gauge, also replaced service valve due to faulty spitter. During safety check a leak was found in yardline at tank which was fixed, then leak check passed outside and inside. It was also found during safety check that the unvented log set was creating CO, it was diagnosed and probable cause is a bad ODS on pilot assembly or broken log, air shutter was adjusted with same effect, appliance was red tagged and turned off at ball valve. Customers are requesting service be done during annual service pak. 15% coupon should be added to billing. s/n PH.UA-053681
